validate_manuscript_plot_data
<i>Validate Manuscript Plot Data</i>

Description

Enforces common figure-data requirements before a manuscript figure is drawn or its auditable plot-data table is written.

Usage

```
validate_manuscript_plot_data(  
  data_plot,  
  required_columns,  
  numeric_bounds = base::list(),  
  allow_empty = FALSE  
)
```

Arguments

data_plot	Data frame to validate.
required_columns	Character vector of required column names.
numeric_bounds	Named list. Each element must be a numeric vector of length two giving inclusive lower and upper bounds for the named column. Infinite bounds are permitted. Missing values are allowed, but non-missing values must be finite and inside the declared bounds.
allow_empty	Logical scalar. If 'FALSE', zero-row data are rejected.

Value

The validated data frame, invisibly.
