allocate_shapley_variance_components
Allocate Shapley Variance Components

Description

Allocates unique variance fractions directly and divides shared fractions equally among their contributing abiotic, association, and spatial components.

Usage

```
allocate_shapley_variance_components(data_slice, group_keys)
```

Arguments

<code>data_slice</code>	One grouped variance-fraction data frame.
<code>group_keys</code>	Group keys supplied by <code>[dplyr::group_modify()]</code> . The values are accepted to preserve the group-modification function contract.

Value

A three-row tibble containing the allocated variance for each component.
