build_sjsdm_artifact_provenance
Build sjSDM Artifact Provenance

Description

Constructs the common one-row provenance contract for native or migrated cross-validation artifacts.

Usage

```
build_sjsdm_artifact_provenance(  
  pipeline_id = NULL,  
  configuration_profile = NULL,  
  created_at = base::Sys.time(),  
  source_schema_version = "2.0.0",  
  migration_applied = FALSE,  
  migration_function = NA_character_,  
  stable_provenance = base::list()  
)
```

Arguments

pipeline_id Pipeline identifier.
configuration_profile
 Active configuration profile.
created_at Finite artifact creation time.
source_schema_version
 Source artifact schema version.
migration_applied
 Whether a v1 conversion was applied.

`migration_function`

Converter name, or 'NA' for native v2 output.

`stable_provenance`

Optional named list of stable scientific fields.

Value

One-row provenance tibble.
