build_sjsdm_selected_fold_artifacts	
<i>Build Selected sjSDM Fold Artifacts</i>	

Description

Aligns prepared responses, selected-candidate probabilities, taxa, null probabilities, and sample metadata into one fold's public prediction and diagnostic artifacts. The function never fits a model.

Usage

```
build_sjsdm_selected_fold_artifacts(  
  list_prepared_fold = NULL,  
  list_fold_context = NULL,  
  data_sample_ids = NULL,  
  taxon_names = NULL,  
  candidate_id = NULL,  
  fit_seed = NULL,  
  regularization_source = NULL,  
  data_predicted = NULL,  
  fold_status = "ok",  
  error_message = NA_character_  
)
```

Arguments

list_prepared_fold	Valid prepared selected-fold inputs.
list_fold_context	Fold identifiers, held-out indices, sizes, and strategy.
data_sample_ids	Normalized sample metadata.

taxon_names Full ordered response-taxon names.
candidate_id, fit_seed, regularization_source
 Selected-candidate provenance.
data_predicted Optional retained-taxon probability matrix. Missing for fit failures.
fold_status 'ok', 'fit_error', or 'prediction_error'.
error_message Failure message, or a missing character value for successful predictions.

Value

Named list with 'data_predictions' and 'data_diagnostics'.
