clean_raw_trait_data	<i>Clean Raw Trait Data</i>
----------------------	-----------------------------

Description

Selects the required columns from a raw trait data frame and removes rows where 'taxon_id' or 'trait_value' is 'NA'.

Usage

```
clean_raw_trait_data(data_raw)
```

Arguments

data_raw	A data frame returned by [extract_traits_from_vegvault()]. Expected to contain at least the columns 'taxon_id', 'trait_domain_name', 'trait_name', and 'trait_value'.
----------	---

Details

Uses [dplyr::any_of()] for the column selection so the function tolerates input data frames that already lack one of the optional columns without error.

Value

A tibble with columns 'taxon_id', 'trait_domain_name', 'trait_name', and 'trait_value', with all rows where 'taxon_id' or 'trait_value' is 'NA' removed.
