count_successful_targets	<i>Count Successful Targets in Store Metadata</i>
--------------------------	---

Description

Counts targets matching a regex pattern whose metadata do not report an error.

Usage

```
count_successful_targets(store_path, target_pattern, data_meta = NULL)
```

Arguments

store_path	Character scalar. Path to the targets store.
target_pattern	Character scalar. Regex used to select target names.
data_meta	Optional tibble with 'name' and 'error' columns. When 'NULL', metadata are read with [read_target_meta_or_empty()].

Value

Integer scalar count of successful matching targets.

Examples

```
count_successful_targets(  
  store_path = "Data/targets/paleo_temporal_europe/pipeline_paleo_temporal",  
  target_pattern = "^model_evaluation_"  
)
```
