flatten_token_node	<i>Flatten one design token node</i>
--------------------	--------------------------------------

Description

Recursively flattens a nested design config node into a named list of scalar token values.

Usage

```
flatten_token_node(value, prefix)
```

Arguments

value	A config node.
prefix	Character scalar token prefix.

Value

A flat named list.

Examples

```
## Not run:  
flatten_token_node(list(a = "b"), "oracle-test")  
  
## End(Not run)
```
