generate_qr_code	<i>Generate ORACLE QR Code</i>
------------------	--------------------------------

Description

Generates a QR code SVG for a URL in ORACLE colours and optionally returns a knitr graphics include object.

Usage

```
generate_qr_code(  
  url,  
  name,  
  background_color,  
  foreground_color,  
  plot,  
  base_path = here::here("Documentation", "Presentations", "IAVS_2026", "figures",  
    "qrcores")  
)
```

Arguments

- url Character scalar URL encoded in the QR code.
- name Character scalar used in output file name ('qr_<name>.svg').
- background_color Character scalar. Background colour passed to [qrcode::generate_svg()].
- foreground_color Character scalar. Foreground colour passed to [qrcode::generate_svg()].
- plot Logical scalar. If 'TRUE', returns [knitr::include_graphics()].
- base_path Character scalar output directory for SVG files.

Value

Character path to generated SVG when 'plot = FALSE', otherwise the object returned by [knitr::include_graphics()].
