get_community_taxa	<i>Get Community Taxa</i>
--------------------	---------------------------

Description

Extracts a vector of unique taxa from a community data frame.

Usage

```
get_community_taxa(data)
```

Arguments

data A data frame containing a 'taxon' column.

Details

Uses dplyr to select distinct values from the 'taxon' column and returns them as a vector.

Value

A character vector of unique taxon names present in the data.
