prepare_decomposition_fold_input
Prepare Decomposition Fold Input

Description

Rebuilds model input for one route and one train/test split using fold-local response filtering and train-only predictor scaling.

Usage

```
prepare_decomposition_fold_input(  
  route = NULL,  
  inputs = NULL,  
  train_ids = NULL,  
  test_ids = NULL  
)
```

Arguments

route	One-row route data frame or named list.
inputs	List returned by 'load_decomposition_diagnostic_inputs()'.
train_ids	Character vector of training sample row names.
test_ids	Character vector of test sample row names.

Value

Named list with training input, test input, test observations, and fold diagnostics.
