run_decomposition_route_cv
<i>Run Decomposition Route Cross-Validation</i>

Description

Fits full and reduced models for one diagnostic route and returns fold-level held-out metrics and convergence diagnostics.

Usage

```
run_decomposition_route_cv(  
  route = NULL,  
  inputs = NULL,  
  cv_indices = NULL,  
  fit_config = base::list(),  
  fit_fn = fit_jsdm_model,  
  predict_fn = stats::predict,  
  convergence_fn = check_convergence_jsdm,  
  verbose = TRUE  
)
```

Arguments

route	One-row route data frame or named list.
inputs	List returned by 'load_decomposition_diagnostic_inputs()'.
cv_indices	Repeated fold test-index list from 'make_repeated_cv_indices()'.
fit_config	Optional list of fitting overrides.
fit_fn	Model fitting function. Defaults to 'fit_jsdm_model()'.
predict_fn	Prediction function. Defaults to 'stats::predict()'.
convergence_fn	Convergence function. Defaults to 'check_convergence_jsdm()'.
verbose	Logical. If 'TRUE', progress messages are printed.

Value

Tibble with one row per route, repeat, fold, and variant.
