verify_sjsdm_setup	<i>Verify sjSDM Setup</i>
--------------------	---------------------------

Description

Comprehensive verification of sjSDM installation, including Python environment, PyTorch, CUDA support, and sjSDM functionality. This function checks that Radian and sjSDM are using the same Python environment and that all dependencies are properly installed.

Usage

```
verify_sjsdm_setup(run_test_model = interactive())
```

Arguments

`run_test_model` Logical. Should a test model be fitted to verify full functionality? Default is TRUE.

Details

This function performs the following checks: 1. Radian configuration (correct Python environment) 2. Python version and location 3. PyTorch installation and version 4. CUDA/GPU availability 5. sjSDM package installation 6. sjSDM Python dependencies 7. Test model fitting (optional)

All checks print their status with [OK] (success) or [FAIL] (failure). If any critical check fails, the function provides troubleshooting guidance.

Value

Invisible list with verification results. Called primarily for side effects (printing verification status).
