|-----------------------------------------------------|
| write_oracle_generated_scss                         |
| <i>Write auto-generated SCSS from design tokens</i> |

---

## Description

Converts the design configuration returned by 'load\_design\_config()' into SCSS variables and CSS custom properties, then writes them to a SCSS file.

## Usage

```
write_oracle_generated_scss(design, output = "oracle_generated.scss")
```

## Arguments

|        |                                                                                                           |
|--------|-----------------------------------------------------------------------------------------------------------|
| design | Named list as returned by 'load_design_config()'.                                                         |
| output | Character scalar. Output file name or absolute path. When relative, written next to the JSON config file. |

## Value

Invisibly, the absolute path to the written file.

## Examples

```
## Not run:  
design <- load_design_config()  
write_oracle_generated_scss(design)  
  
## End(Not run)
```
