compute\_fast\_spatial\_mev\_basis

*Compute the Fast Spatial MEM Basis Engine Result*

---

## Description

Fixed-seed NystrC6m-strategy implementation for [compute\_spatial\_mev\_basis()].

## Usage

```
compute_fast_spatial_mev_basis(  
  mat_coords,  
  fast_eigenvectors,  
  fast_seed,  
  fast_function = NULL  
)
```

## Arguments

`mat_coords` Numeric projected-coordinate matrix.  
`fast_eigenvectors` Positive integer controlling the low-rank basis.  
`fast_seed` Positive integer used locally for knot selection.  
`fast_function` Fast Moran-eigenvector construction function.

## Value

Named list containing the complete MEV matrix, fast projection state, engine method, and projection method.
