compute_fast_spatial_mev_basis

Compute the Fast Spatial MEM Basis Engine Result

Description

Fixed-seed NystrC6m-strategy implementation for [compute_spatial_mev_basis()].

Usage

```
compute_fast_spatial_mev_basis(  
  mat_coords,  
  fast_eigenvectors,  
  fast_seed,  
  fast_function = NULL  
)
```

Arguments

`mat_coords` Numeric projected-coordinate matrix.
`fast_eigenvectors` Positive integer controlling the low-rank basis.
`fast_seed` Positive integer used locally for knot selection.
`fast_function` Fast Moran-eigenvector construction function.

Value

Named list containing the complete MEV matrix, fast projection state, engine method, and projection method.
