has_target_succeeded *Check Whether a Targets Target Succeeded*

Description

Checks targets metadata for one target name and returns 'TRUE' when the target is present and has no recorded error.

Usage

```
has_target_succeeded(data_meta, target_name)
```

Arguments

`data_meta` A targets metadata data frame with columns 'name' and 'error', or 'NULL'.
 'NULL' is treated as no successful target.

`target_name` A single non-empty character string identifying the target to check.

Value

A single logical value.

Examples

```
data_meta <- tibble::tibble(  
  name = "list_jsdm_evaluation_fitted_genus",  
  error = NA_character_  
)  
has_target_succeeded(data_meta, "list_jsdm_evaluation_fitted_genus")
```
