plot_spatial_variance_waffle
<i>Plot Spatial Variance Waffle</i>

Description

Builds a unit-level waffle plot using precomputed fill colours.

Usage

```
plot_spatial_variance_waffle(  
  data_waffle,  
  plot_title,  
  vec_continent_shapes,  
  flag_show_shape_legend = TRUE,  
  flag_show_fill_legend = FALSE,  
  vec_component_colours = NULL,  
  vec_required_components = base::c("Abiotic", "Spatial", "Associations"),  
  fill_legend_style = base::c("swatch", "triangle"),  
  plot_theme = ggplot2::theme_classic(),  
  facet_switch = "both",  
  tile_border_colour = "white",  
  tile_linewidth = 0.33,  
  tile_alpha = 1,  
  point_size = 2,  
  point_stroke = 0.6,  
  triangle_legend_arguments = base::list(),  
  triangle_legend_rel_width = 0.34  
)
```

Arguments

<code>data_waffle</code>	Data frame returned by <code>[prepare_spatial_variance_waffle_data()]</code> .
<code>plot_title</code>	Single character string used as the plot title.
<code>vec_continent_shapes</code>	Named integer vector mapping continent identifiers to point shapes.
<code>flag_show_shape_legend</code>	Logical. If 'TRUE', shows the continent shape legend.
<code>flag_show_fill_legend</code>	Logical. If 'TRUE', shows a fill legend for base component colours.
<code>vec_component_colours</code>	Optional named character vector mapping component IDs to HEX colours. Required when 'flag_show_fill_legend = TRUE'.
<code>vec_required_components</code>	Character vector of component IDs shown in the optional fill legend.
<code>fill_legend_style</code>	Single character string specifying fill legend style when 'flag_show_fill_legend = TRUE'. One of "swatch" (default) or "triangle".
<code>plot_theme</code>	A 'ggplot2' theme object used as the base plot theme.
<code>facet_switch</code>	Optional facet strip switch passed to <code>[ggplot2::facet_grid()]</code> . Use 'NULL', "x", "y", or "both".
<code>tile_border_colour</code>	Single character string used for waffle tile borders.
<code>tile_linewidth</code>	Numeric scalar giving waffle tile border width.
<code>tile_alpha</code>	Numeric scalar giving waffle tile alpha.
<code>point_size</code>	Numeric scalar giving continent point size.
<code>point_stroke</code>	Numeric scalar giving continent point stroke.
<code>triangle_legend_arguments</code>	Named list of optional arguments forwarded to <code>[plot_variance_component_triangle_legend()]</code> when 'fill_legend_style = "triangle"'.
<code>triangle_legend_rel_width</code>	Numeric scalar giving the relative width of the triangle legend.

Value

A 'ggplot' object.
