Assign Accepted sjSDM CV Budgets to Production Units

Description

Assigns the most demanding accepted median/maximum representative budget to ordinary units within each analysis-tier-continent-resolution group. A benchmarked historical outlier or temporal profile keeps its own accepted budget.

Usage

```
resolve_sjsdm_cv_calibration_budgets(  
  data_units = NULL,  
  data_accepted = NULL,  
  cv_n_step_size = NA_real_,  
  cv_n_early_stopping = NA_integer_  
)
```

Arguments

data_units	Complete calibration unit inventory.
data_accepted	Accepted representative budgets with unit keys, selection reasons, budget order, iterations, and sampling.
cv_n_step_size, cv_n_early_stopping	Fixed CV optimizer values to publish; missing values are retained as typed 'NA' for CSV/config serialization.

Value

Unit-keyed production CV budget table.
