validate_sjsdm_tuning_repeat_coverage
<i>Validate sjSDM Tuning Repeat Coverage</i>

Description

Verifies that deterministic work items contain every repeat required by a staged tuning schedule before any candidate-fold fits execute.

Usage

```
validate_sjsdm_tuning_repeat_coverage(  
  data_work_items = NULL,  
  data_schedule = NULL  
)
```

Arguments

data_work_items	Complete work-item table returned by [build_sjsdm_tuning_work_items()].
data_schedule	Tuning schedule returned by [build_sjsdm_tuning_schedule()].

Value

Invisible 'TRUE'. The function aborts when staged repeats are unavailable or candidate fold coverage is inconsistent.
