---

reshape\_community\_to\_long  
*Reshape Community Data to Long Format*

---

## Description

Reshapes wide community counts to one taxon observation per row.

## Usage

```
reshape_community_to_long(data_community = NULL)
```

## Arguments

`data_community` A wide data frame containing 'dataset\_name', 'sample\_name', and at least one taxon-count column.

## Details

Missing taxon counts are omitted from the returned long data.

## Value

A data frame in long format with columns 'dataset\_name', 'sample\_name', 'taxon', and 'pollen\_count'.

## Examples

```
data_community <-  
  tibble::tibble(  
    dataset_name = "example",  
    sample_name = "sample_1",  
    Pinus = 10,  
    Betula = 5  
  )
```

```
reshape_community_to_long(data_community = data_community)
```
