plot_anova_components_by_age
Plot ANOVA Variance Components by Age

Description

Creates a line-and-point plot of sjSDM ANOVA variance components (Nagelkerke RB2) across time slices (ages).

Usage

```
plot_anova_components_by_age(  
  data_anova_components,  
  title = NULL,  
  subtitle = NULL  
)
```

Arguments

data_anova_components	A data frame or tibble with columns age (numeric), component (character), and R2_Nagelkerke (numeric). Typically the output of aggregate_anova_components() .
title	Optional character string for the plot title. Defaults to NULL (no title).
subtitle	Optional character string for the plot subtitle. Defaults to NULL (no subtitle).

Details

The x-axis is reversed so that older ages appear on the left and the y-axis is clamped to [0, NA]. Each variance component is drawn as a coloured line with points.

Value

A ggplot object.
