run_sjsdm_tuning_fold_candidates
Run sjSDM Tuning Candidates for One Fold

Description

Prepares one fold once, then fits, predicts, and scores every regularization candidate while preserving failures as compact status rows.

Usage

```
run_sjsdm_tuning_fold_candidates(  
  data_candidates = NULL,  
  list_fold_context = NULL,  
  prepare_fold_function = NULL,  
  fit_function = NULL,  
  predict_function = NULL,  
  seed = 900723L,  
  epsilon = 1e-06  
)
```

Arguments

data_candidates	Candidate table returned by [make_sjsdm_regularization_candidates()].
list_fold_context	Fold metadata returned by [make_sjsdm_tuning_fold_context()].
prepare_fold_function, fit_function, predict_function	Injectable fold preparation, fit, and prediction functions documented by [run_sjsdm_tuning_candidate].
seed	Non-negative base integer used to derive candidate fit seeds.
epsilon	Probability clipping tolerance passed to [score_sjsdm_tuning_predictions()].

Value

Compact candidate-by-fold tuning table with metrics and structured status.
