| <i>Load Decomposition Model-Fitting Configuration</i> |

---

## Description

Internal loader that prefers the shared configuration target and falls back to the taxonomic-resolution-specific target.

## Usage

```
.load_decomposition_model_fitting_config(  
  store_path,  
  resolution_id,  
  tar_read_fn  
)
```

## Arguments

|               |                                |
|---------------|--------------------------------|
| store_path    | Targets store path.            |
| resolution_id | Taxonomic resolution suffix.   |
| tar_read_fn   | Function used to read targets. |

## Value

The model-fitting configuration value.
