deduplicate_modern_community_data
<i>Deduplicate Modern Community Data</i>

Description

Drops exact duplicated modern community records using a deterministic lexicographic keep rule.

Usage

```
deduplicate_modern_community_data(  
  data_source = NULL,  
  data_coordinates = NULL,  
  data_quality_report = NULL  
)
```

Arguments

<code>data_source</code>	A long-format community data frame with ‘dataset_name’, ‘sample_name’, ‘age’, ‘taxon’, and ‘pollen_count’ columns.
<code>data_coordinates</code>	A coordinate data frame with dataset names in a ‘dataset_name’ column or row names and ‘coord_long’, ‘coord_lat’ columns.
<code>data_quality_report</code>	Optional modern QA report. Used by targets pipelines to make the QA gate an explicit upstream dependency before deduplication.

Value

A named list with ‘data_community’ and ‘data_dropped_records’ elements.
