fit_hclust	<i>Fit Hierarchical Clustering from a Distance Matrix</i>
------------	---

Description

Fits a hierarchical clustering model from a precomputed dissimilarity matrix using `'stats::hclust()'`.

Usage

```
fit_hclust(dist_mat, method = "ward.D2")
```

Arguments

dist_mat	A <code>"dist"</code> object (as produced by <code>'compute_dissimilarity_matrix()'</code> or <code>'stats::as.dist()'</code>). Must contain no <code>'NA'</code> or non-finite values.
method	A single character string passed to <code>'stats::hclust()'</code> as the <code>'method'</code> argument. Default: <code>"ward.D2"</code> . See <code>'?stats::hclust'</code> for all valid linkage methods.

Value

An object of class `"hclust"` as returned by `'stats::hclust()'`.
