transform_to_proportions
<i>Transform to Proportions</i>

Description

Transforms pollen count data into proportions based on total pollen count.

Usage

```
transform_to_proportions(data = NULL, pollen_sum = NULL)
```

Arguments

data	A data frame containing pollen count data.
pollen_sum	A data frame with total pollen counts for each sample.

Details

Joins the input data with total pollen counts and calculates proportions using ‘dplyr::mutate‘.

Value

A data frame with pollen proportions, excluding ‘pollen_sum‘ and ‘pollen_count‘ columns.
