Aggregate Colocated Community Records

Description

Aggregates same-prefix colocated modern records and keeps cross-database colocations for inspection.

Usage

```
aggregate_colocated_community_records(
  data_source = NULL,
  data_coordinates = NULL,
  data_abiotic_long = NULL
)
```

Arguments

`data_source`	A long-format community data frame with 'dataset_name', 'sample_name', 'age', 'taxon', and 'pollen_count' columns.
`data_coordinates`	A coordinate data frame with dataset names in a 'dataset_name' column or row names and 'coord_long', 'coord_lat' columns.
`data_abiotic_long`	A long-format abiotic table with columns 'dataset_name', 'age', 'abiotic_variable_name', and 'abiotic_value'.

Value

A named list containing aggregated analysis streams and traceability tables.
