Get Preprocessing Controller

Description

Creates a local 'crew' controller for paleo preprocessing prebuilds when the 'crew_mori' backend is requested through environment variables.

Usage

```
build_preprocessing_controller()
```

Details

The worker count is read from 'BIODYNAMICS_PREPROCESSING_WORKERS'. This helper is intentionally environment-driven so normal full-pipeline runs keep the default sequential scheduler.

Value

A 'crew' local controller when 'BIODYNAMICS_PREPROCESSING_BACKEND = "crew_mori"', otherwise 'NULL'.

See Also

[crew::crew_controller_local()]

Examples

```
build_preprocessing_controller()
```
