Make Repeated Cross-Validation Indices

Description

Creates reproducible repeated K-fold test-index lists for project-owned decomposition diagnostics with [run_decomposition_diagnostic_folds()].

Usage

```
build_repeated_diagnostic_fold_indices(
  n_samples,
  n_folds = 2L,
  n_repeats = 1L,
  seed = 900723L
)
```

Arguments

`n_samples`	Single integer. Number of samples to split into folds.
`n_folds`	Single integer. Number of folds per repeat. Default is '2L'.
`n_repeats`	Single integer. Number of repeated fold partitions. Default is '1L'.
`seed`	Single integer. Random seed used for reproducible fold assignment.

Value

A named list with one element per repeat. Each repeat is a named list of integer test indices, one element per fold.

Examples

```
build_repeated_diagnostic_fold_indices(
  n_samples = 8L,
  n_folds = 2L,
  n_repeats = 2L,
```

```
  seed = 900723L
)
```
