Build Compatible Common sjSDM Regularization Artifacts

Description

Splits cross-tier tuning summaries by compatible response context and builds one common regularization artifact for each context.

Usage

```
build_sjsdm_common_regularization_artifacts(
  data_tuning_summary = NULL,
  created_at = NULL
)
```

Arguments

`data_tuning_summary`	Non-empty tuning-summary table spanning spatial tiers and model contexts.
`created_at`	Single POSIX date-time passed to [build_sjsdm_common_regularization_artifact()].

Value

Named list containing bound artifact, tier-loss, and candidate-aggregation tibbles.
