Build an sjSDM Cross-Validation Fitting Configuration

Description

Combines structural model settings with an independent, validated CV fit budget while excluding final-only ANOVA settings.

Usage

```
build_sjsdm_cross_validation_fitting_config(
  config_model_fitting = NULL,
  config_fit_budget = NULL
)
```

Arguments

`config_model_fitting`	Full-data model-fitting configuration.
`config_fit_budget`	CV budget containing 'n_iter_initial', 'n_iter_max', 'n_sampling', 'n_step_size', and 'n_early_stopping'. When 'calibration_status' is supplied for a production profile, it must equal '"calibrated"'.

Value

A fitting-compatible CV configuration. 'n_iter' begins at 'n_iter_initial'; both iteration bounds are retained for escalation.

Examples

```
## Not run:
build_sjsdm_cross_validation_fitting_config(
  config_model_fitting = config_model_fitting,
  config_fit_budget = config_cross_validation$fit_budget
)

## End(Not run)
```
