Build an sjSDM Fold Prediction Skeleton

Description

Constructs exact typed out-of-fold rows when selected-fold preparation fails before aligned observations and predictions are available.

Usage

```
build_sjsdm_fold_prediction_skeleton(
  list_fold_context = NULL,
  data_sample_ids = NULL,
  taxon_names = NULL,
  prediction_status = "preparation_error"
)
```

Arguments

`list_fold_context`	Fold context with repeat, fold, and held-out row indices.
`data_sample_ids`	Normalized sample metadata with sample, row, and location identifiers.
`taxon_names`	Full ordered response-taxon names.
`prediction_status`	Failure status assigned to every skeleton row.

Value

Typed out-of-fold prediction tibble for the held-out fold.
