Collect Unreadable Legacy sjSDM Cache Targets

Description

Collects prepared endpoints, errored targets, and named dependencies that participate in a legacy 'qs' cache-read failure.

Usage

```
build_sjsdm_legacy_cache_invalidation_targets(
  data_endpoints = NULL,
  data_target_errors = NULL
)
```

Arguments

`data_endpoints`	Prepared-endpoint diagnostics containing 'target_name', 'endpoint_status', and 'error_message'.
`data_target_errors`	Target metadata containing 'name' and 'error'.

Value

A unique character vector of targets to invalidate before retrying.
