Build an sjSDM Predictor Structure

Description

Internal helper that builds linear, DNN, or absent predictor structures.

Usage

```
.build_sjsdm_predictor_structure(
  data_predictors = NULL,
  predictor_formula = NULL,
  predictor_method = c("linear", "DNN", "none"),
  lambda = 0,
  alpha = 0.5
)
```

Arguments

`data_predictors`	Predictor data frame or 'NULL' for no structure.
`predictor_formula`	Formula passed to the sjSDM structure constructor.
`predictor_method`	One of '"linear"', '"DNN"', or '"none"'.
`lambda`, `alpha`	Regularisation settings for linear structures.

Value

An sjSDM predictor structure or 'NULL'.
