Make sjSDM Tuning Fold Context

Description

Converts one repeat and fold from location-level assignments into disjoint training and test sample indices plus compact fold metadata.

Usage

```
build_sjsdm_tuning_fold_context(
  data_assignments = NULL,
  repeat_id = NULL,
  fold_id = NULL
)
```

Arguments

`data_assignments`	Location-level assignment table containing 'repeat_id', 'fold_id', 'location_id', 'row_indices', and optional 'cv_strategy'.
`repeat_id`, `fold_id`	Positive integer identifiers selecting one held-out fold.

Value

Named list containing repeat and fold IDs, sorted train/test indices, location and sample counts, and the CV strategy.
