# Build Programmatic Trait Review Triage

## Description

Proposes no action only after completed investigation, retains unresolved evidence for programmatic review, and groups reproducible correction hypotheses for cost-gated agent investigation.

## Usage

```
build_trait_review_programmatic_triage(
  data_candidate_recommendations,
  data_approved_decisions,
  data_proposal_diagnostics,
  data_dataset_evidence,
  data_record_evidence,
  data_agent_adjudications,
  evidence_reference,
  min_source_pattern_candidates = 3L,
  source_factor_relative_tolerance = 0.25,
  agent_groups_per_batch = 10L
)
```

## Arguments

| | |
|---|---|
| `data_candidate_recommendations` | Candidate recommendations from [diagnose_trait_review_candidates()]. |
| `data_approved_decisions` | Current canonical decisions from [load_trait_review_decisions()]. |
| `data_proposal_diagnostics` | Recovered selector diagnostics from [diagnose_trait_review_candidates()]. |
| `data_dataset_evidence` | Dataset summaries from [build_trait_review_evidence_packets()]. |
| `data_record_evidence` | Record evidence from [build_trait_review_evidence_packets()]. |

| | |
|---|---|
| `data_agent_adjudications` | Completed adjudications. May be a zero-row data frame. |
| `evidence_reference` | Non-empty path to the human-readable triage report. |
| `min_source_pattern_candidates` | Minimum candidates sharing a source/factor pattern before escalation. |
| `source_factor_relative_tolerance` | Maximum relative error from factors 10, 100, or 1000. |
| `agent_groups_per_batch` | Maximum exception groups assigned to one initial agent batch. |

## Value

A named list containing candidate triage, completed-investigation no-action proposals, pending programmatic cases, exception memberships and groups, a cost-gated agent queue, and summary.
