Classify a Previous sjSDM Preparation Error

Description

Recovers an expected preparation diagnosis from target metadata without allowing stale downstream model errors to contaminate the classification.

Usage

```
classify_sjsdm_previous_preparation_error(
  data_target_errors = NULL,
  data_new_errors = NULL,
  classify_error_function = classify_sjsdm_unit_pipeline_error
)
```

Arguments

`data_target_errors`	Target metadata containing 'name' and 'error'.
`data_new_errors`	Optional target errors refreshed by the current run. Dependency-only cache cascades defer to a registered expected root in 'data_target_errors'.
`classify_error_function`	Injectable target-error classifier.

Value

A preparation-error classification list.
