Diagnose Colocated Community Records

Description

Returns same-coordinate, same-age community colocations with source-prefix and community-signature flags.

Usage

```
diagnose_colocated_community_records(

  data_community = NULL,

  data_coordinates = NULL

)
```

Arguments

`data_community`	A long-format community data frame with 'dataset_name', 'sample_name', 'age', 'taxon', and 'pollen_count' columns.
`data_coordinates`	A coordinate data frame with dataset names in a 'dataset_name' column or row names and 'coord_long', 'coord_lat' columns.

Value

A tibble with one row per colocated group and diagnostic flags used by modern preprocessing.
