Diagnose Torch and CUDA Details

Description

Non-aborting diagnostic that safely introspects PyTorch and CUDA availability for the sjSDM runtime checks.

Usage

```
diagnose_torch_cuda_details(verbose = FALSE)
```

Arguments

`verbose`	Logical. If 'TRUE', print diagnostic messages.

Value

Named list with torch/CUDA diagnostic results: - 'torch_available': torch import success - 'torch_version': version string - 'torch_compiled_cuda': CUDA compilation flag - 'cuda_version': CUDA version (if compiled) - 'cuda_runtime_available': GPU visibility at runtime - 'gpu_device_count': number of visible GPUs - 'gpu_device_names': names of visible GPU devices - 'status_ok': both compilation and runtime successful
