Extract Community Records

Description

Extracts nested community records from an in-memory VegVault result.

Usage

```
extract_community_records(data_vegvault = NULL)
```

Arguments

`data_vegvault`	A data frame containing the columns 'dataset_name' and 'data_community'.

Details

This function extracts an in-memory component. It does not load data from persistent storage.

Value

A data frame containing 'dataset_name' and the unnested community-record columns.

Examples

```
data_vegvault <-
  tibble::tibble(
    dataset_name = "example",
    data_community = base::list(
      tibble::tibble(sample_name = "sample_1", Pinus = 10)
    )
  )

extract_community_records(data_vegvault = data_vegvault)
```
