Fit One Predictive Decomposition Variant

Description

Fits, diagnoses, predicts, and evaluates one model variant for one diagnostic fold.

Usage

```
fit_decomposition_variant(
  data_fold_input,
  route_id,
  repeat_id,
  fold_id,
  variant_name,
  list_variant,
  age_formula_mode,
  config_model_fitting,
  fit_config,
  fit_fn,
  predict_fn,
  convergence_fn
)
```

Arguments

`data_fold_input`	Prepared train and test inputs for one fold.
`route_id`	Diagnostic route identifier.
`repeat_id`	Repeated-fold identifier.
`fold_id`	Fold identifier.

`variant_name`	Model variant identifier.
`list_variant`	Variant-specific spatial and biotic settings.
`age_formula_mode`	Environmental age-formula mode.
`config_model_fitting`	Model-fitting configuration.
`fit_config`	Optional fitting overrides.
`fit_fn`	Injected model-fitting function.
`predict_fn`	Injected prediction function.
`convergence_fn`	Injected convergence diagnostic function.

Value

One-row variant metric and diagnostic tibble.
