# Check for Shared sjSDM Tuning Evidence

## Description

Reads every requested native-v2 unit tuning artifact and reports whether at least one contains candidate evidence. Missing, unreadable, or malformed inputs fail closed.

## Usage

```
has_sjsdm_tuning_evidence(
  store_paths = NULL,
  target_names = NULL,
  read_target_function = targets::tar_read_raw
)
```

## Arguments

| | |
|---|---|
| `store_paths` | Non-empty character vector of unit targets-store paths. |
| `target_names` | Non-empty character vector of tuning-summary target names. |
| `read_target_function` | Injectable target reader. Defaults to [targets::tar_read_raw()]. |

## Value

One logical value.

## Examples

```
## Not run:
has_sjsdm_tuning_evidence(
  store_paths = "Data/targets/unit/pipeline",
  target_names = "list_sjsdm_cv_tuning_artifact"
)

## End(Not run)
```
