Load Continental Rows from Spatial Grid

Description

Reads a spatial grid CSV file and filters it to rows where the 'scale' column equals '"continental"'. Validates that at least one continental row is present before returning the result.

Usage

```
load_continental_spatial_grid_rows(path_spatial_grid)
```

Arguments

`path_spatial_grid`	A character string giving the path to the spatial grid CSV file (e.g. 'here::here("Data/Input/spatial_grid.csv")').

Details

The function performs the following steps:

1. Validates that 'path_spatial_grid' is a single character string pointing to an existing file. 2. Reads the CSV with 'readr::read_csv()'. 3. Filters to rows where 'scale == "continental"'. 4. Asserts that at least one row is retained. 5. Returns the filtered data frame.

Value

A data frame containing only the rows of the spatial grid where 'scale == "continental"'.
