Read sjSDM Tier Tuning Artifact

Description

Reads the shared tier artifact table and selects the row matching one unit model context.

Usage

```
load_sjsdm_tier_tuning_artifact(
  store_path = NULL,
  data_model_context = NULL,
  read_target_function = targets::tar_read_raw
)
```

Arguments

`store_path`	Character scalar path to the dedicated tier-tuning targets store.
`data_model_context`	One-row model-context table.
`read_target_function`	Injectable target reader. Defaults to [targets::tar_read_raw()].

Value

One matching artifact row, or an exact typed-empty table when the shared target is unavailable or does not yet contain the requested context.

Examples

```
## Not run:
load_sjsdm_tier_tuning_artifact(
  store_path = "Data/targets/paleo/pipeline_sjsdm_tier_tuning",
  data_model_context = data_sjsdm_model_context
)

## End(Not run)
```
