Load sjSDM Unit Tuning Store Paths

Description

Discovers existing unit stores for the tier pipeline from one resolved tuning context.

Usage

```
load_sjsdm_unit_tuning_store_paths(
  list_tuning_context = NULL,
  target_store = load_active_config_value("target_store")
)
```

Arguments

`list_tuning_context`	Context containing 'pipeline_name' and 'nested_unit_stores'.
`target_store`	Root targets-store path.

Value

Existing unit tuning-store paths. When the tuning orchestrator supplies 'SJSMD_TUNING_UNIT_SUFFIXES', only successful units are returned.
