Plot ANOVA Variance Components by Age

Description

Creates a line-and-point plot of sjSDM ANOVA variance components (Nagelkerke R^2) across time slices (ages).

Usage

```
plot_anova_components_by_age(
  data_anova_components,
  title = NULL,
  subtitle = NULL
)
```

Arguments

`data_anova_components`	A data frame or tibble with columns `age` (numeric), `component` (character), and `R2_Nagelkerke` (numeric). Typically the output of `aggregate_jsdm_variance_components()`.
`title`	Optional character string for the plot title. Defaults to `NULL` (no title).
`subtitle`	Optional character string for the plot subtitle. Defaults to `NULL` (no subtitle).

Details

The x-axis is reversed so that older ages appear on the left and the y-axis is clamped to [0, NA]. Each variance component is drawn as a coloured line with points.

Value

A `ggplot` object.
