Plot a Manuscript Spatial Association Atlas Panel

Description

Draws one continent and spatial-tier map. Each spatial unit contains a horizontally ordered genus, family, and functional-type glyph so all taxonomic resolutions remain comparable without separate map panels.

Usage

```
plot_manuscript_spatial_map_panel(
  data_map,
  sf_world,
  continent_id,
  scale_id,
  resolution_ids = base::c("genus", "family", "functional_type"),
  panel_label
)
```

Arguments

`data_map`	Spatial association map data returned by [prepare_spatial_association_map_data()].
`sf_world`	World basemap as an sf object.
`continent_id`, `scale_id`	Character identifiers selecting one panel.
`resolution_ids`	Ordered character resolution identifiers.
`panel_label`	Character scalar used as the compact panel title.

Value

A ggplot object.
