Plot Spatial Variance Waffle

Description

Builds a unit-level waffle plot using precomputed fill colours.

Usage

```
plot_spatial_variance_waffle(
  data_waffle,
  plot_title,
  vec_continent_shapes,
  flag_show_shape_legend = TRUE,
  flag_show_fill_legend = FALSE,
  vec_component_colours = NULL,
  vec_required_components = base::c("Abiotic", "Spatial", "Associations"),
  fill_legend_style = base::c("swatch", "triangle"),
  plot_theme = ggplot2::theme_classic(),
  facet_switch = "both",
  tile_border_colour = "white",
  tile_linewidth = 0.33,
  tile_alpha = 1,
  point_size = 2,
  point_stroke = 0.6,
  triangle_legend_arguments = base::list(),
  triangle_legend_rel_width = 0.34
)
```

Arguments

`data_waffle`	Data frame returned by [prepare_spatial_variance_waffle_data()].
`plot_title`	Single character string used as the plot title.

`vec_continent_shapes`	Named integer vector mapping continent identifiers to point shapes.
`flag_show_shape_legend`	Logical. If 'TRUE', shows the continent shape legend.
`flag_show_fill_legend`	Logical. If 'TRUE', shows a fill legend for base component colours.
`vec_component_colours`	Optional named character vector mapping component IDs to HEX colours. Required when 'flag_show_fill_legend = TRUE'.
`vec_required_components`	Character vector of component IDs shown in the optional fill legend.
`fill_legend_style`	Single character string specifying fill legend style when 'flag_show_fill_legend = TRUE'. One of '"swatch"' (default) or '"triangle"'.
`plot_theme`	A 'ggplot2' theme object used as the base plot theme.
`facet_switch`	Optional facet strip switch passed to [ggplot2::facet_grid()]. Use 'NULL', '"x"', '"y"', or '"both"'.
`tile_border_colour`	Single character string used for waffle tile borders.
`tile_linewidth`	Numeric scalar giving waffle tile border width.
`tile_alpha`	Numeric scalar giving waffle tile alpha.
`point_size`	Numeric scalar giving continent point size.
`point_stroke`	Numeric scalar giving continent point stroke.
`triangle_legend_arguments`	Named list of optional arguments forwarded to [plot_variance_component_triangle_legend()] when 'fill_legend_style = "triangle"'.
`triangle_legend_rel_width`	Numeric scalar giving the relative width of the triangle legend.

Value

A 'ggplot' object.
