Read Scalar Value from VegVault

Description

Executes one SQL query against an open VegVault connection and returns the first value from the first column.

Usage

```
read_vegvault_scalar(conn, sql)
```

Arguments

`conn`	Active DBI connection.
`sql`	Character scalar SQL query.

Value

Scalar value from the first query column.

Examples

```
## Not run:

con <- DBI::dbConnect(RSQLite::SQLite(), "Data/Input/VegVault.sqlite")

on.exit(DBI::dbDisconnect(con), add = TRUE)

read_vegvault_scalar(con, "select count(*) from Datasets")

## End(Not run)
```
