Resolve Functional-Type Trait Transformations

Description

Resolves one supported functional-type sensitivity variant to its explicit named trait-transformation contract.

Usage

```
resolve_functional_type_trait_transformations(trait_variant_id = "all_six")
```

Arguments

`trait_variant_id`	Character scalar identifying the sensitivity variant. Supported values are "all_six", "without_lma", "without_nitrogen", "without_lma_nitrogen", and "without_ssd".

Details

The primary analysis uses all six traits. Sensitivity variants remove provisional-unit traits individually or together, or remove stem specific density to test sensitivity to its source uncertainty.

Value

A named character vector of trait transformations.

Examples

```
resolve_functional_type_trait_transformations("all_six")

resolve_functional_type_trait_transformations("without_lma")
```
